

Shadow Power Play

A synthetic public PDFRejuvenator sample adventure. All names, places, factions, and rules text are original placeholder material for testing PDF-to-editable-SVG conversion.

Overview

Night Harbor is one bad week from a blackout. A private security contractor, a civic reform group, and an underground courier network are all chasing the same stolen grid ledger. The player characters arrive when the ledger changes hands during a rain-soaked fundraiser.

Read Aloud: Thunder rolls over the old transit hall. The lights dim, recover, and dim again. Across the room, a silver case changes hands under the balcony while every camera in the hall turns toward the wrong door.

Opening Beats

Beat	Pressure	Clue
1	Guests panic as lights fail in sequence.	A camera blinks under the catering table.
2	A courier flees through the security corridor.	The courier carries a false case.
3	Security locks the public exits.	The real case was swapped before the lockdown.
4	A city engineer asks for protection.	Her badge opens the substation gate.

Faction Clock

Advance one clock segment whenever the group spends too long, makes a loud move, or leaves a clue behind. At six segments, the contractor frames the courier network and triggers a controlled outage.

Clock	Event
1	Contractor drones sweep nearby alleys.
2	The civic reform group leaks partial ledger pages.
3	A decoy repair crew enters the east substation.
4	The stolen ledger is copied to a rooftop relay.
5	Police scanners report a citywide power threat.
6	The blackout begins in three districts.

Keyed Locations

A. Transit Hall Balcony

The balcony overlooks the fundraiser floor and offers direct access to the lighting booth. A careful search finds a patched control cable and a strip of black cloth caught in the railing.

B. Service Corridor

The corridor is cramped, wet, and loud with old pipes. It is useful for chases because sightlines are short and every junction has at least two ways out.

C. East Substation

This fenced brick building houses the relay hardware. The alarm panel accepts the city engineer's badge, but opening the inner cage starts a three-minute silent alarm.

Obstacle	Simple Approach	Complication
Fence	Climb, cut, or use a badge.	A patrol vehicle turns the corner.
Relay Cage	Bypass the keypad.	The keypad records failed attempts.
Ledger Cache	Pull the drive from bay seven.	The drive is mirrored to a rooftop relay.

Sample NPC Blocks

Name	Role	Want	Tell
Mara Venn	City engineer	Keep the grid online.	Always checks exits before speaking.
Jon Vale	Courier broker	Recover the real ledger.	Knows who hired the decoy crew.
Director Hale	Security executive	Own the public story.	Uses calm language when cornered.

Resolution Paths

The adventure ends when the characters control the ledger, expose the frame-up, or choose which faction gets the evidence. The strongest ending gives the city engineer enough proof to halt the outage without handing full control to any one faction.

Outcome	Public Result	Follow-Up Hook
Ledger published	The contractor loses the story.	Someone edits one page before release.
Ledger withheld	The outage is prevented.	The civic group demands transparency.
Ledger traded	One faction gains leverage.	A second ledger appears with different numbers.

Design Note: This sample intentionally contains multi-column prose, tables, boxed text, page numbers, and placeholder art boxes so PDFRejuvenator has public material to process and validate.

Conversion Stress Checklist

Feature	Present
Paragraph text with indentation	Yes
Repeated table headers	Yes
Boxed read-aloud text	Yes
Placeholder images	Yes
Mixed fonts and page footer	Yes
